DevOps / MLOps Engineer with hands-on experience in AWS, Terraform, Docker, Kubernetes, GitHub Actions, Argo CD, and cloud-native infrastructure. Experienced in building CI/CD and GitOps workflows, observability platforms, and Kubernetes-based MLOps pipelines using DVC and KServe.

PROFESSIONAL EXPERIENCE

DevOps Engineer – Network Science (Mumbai)

Nov 2025 – March 2026

- Architected and deployed scalable AWS infrastructure across 3 geographic regions using modular Terraform, hosting 12+ microservices and ensuring regional failover for high availability.
- Designed an architecture to secure cloud networking using VPCs, VPC Peering, ALB, and Auto Scaling Groups, enabling scalable cross-region deployments.
- Built and maintained CI/CD pipelines for frontend, backend using GitHub Actions, reducing manual deployment effort by 50% and enabling reliable production releases.
- Established GitHub repository governance by implementing branching strategies, branch protection rules, access controls, and standardized deployment workflows.
- Containerized microservices using Docker, optimized Dockerfiles and Docker Compose configurations, integrated Amazon ECR with ECS deployments.
- Implemented a centralized monitoring and observability platform using Prometheus, Grafana, OpenTelemetry, and SigNoz, covering infrastructure, applications, and databases, reducing overall debugging time by 80%.
- Improved cloud reliability through security assessments, vulnerability remediation, FinOps optimization, infrastructure documentation, and operational runbooks.

TECHNICAL SKILLS

- **Systems:** Operating System, Linux, Computer Networks, Shell Scripting
- **Cloud & Infrastructure:** AWS, Terraform(IaC), Ansible
- **CI/CD Automation:** Git, GitHub, GitHub Actions, ArgoCD, GitOps
- **Containerization:** Docker, Kubernetes, Amazon ECR, Amazon ECS
- **Monitoring & Observability:** Prometheus, Grafana, OpenTelemetry, SigNoz
- **MLOps:** DVC, MLflow, KServe, Kubeflow, AWS SageMaker AI, Model Training, Model Deployment, Model Serving, Model Versioning

PROJECTS

GitOps Microservices Deployment | AWS | Kubernetes | Terraform | Argo CD

August 2026

- Provisioned AWS EKS Auto Mode with custom VPC networking and IAM using Terraform.
- Built GitOps-based CI/CD with GitHub Actions, ECR, and Argo CD for automated deployments.
- Deployed a microservices retail app on Kubernetes with NGINX Ingress and TLS via Cert-Manager.

Realtime Customer Churn Prediction Pipeline | AWS | Kubernetes | KServe | ArgoCD

July 2026

- Built an entire MLOps pipeline covering dataset versioning, model training, deployment, and serving.
- Versioned datasets with DVC and S3, trained models using versioned datasets for reproducible workflow.
- Automated model deployment and serving with ArgoCD, enabling GitOps-based inference deployments.

Kubernetes-Powered MERN Chat App | AWS | Docker | Kubernetes

September 2025

- Deployed a full-stack MERN chat app on a local Kubernetes cluster (Minikube).
- Managed frontend, Node.js, and MongoDB database using container orchestration.
- Orchestrated automated scalable deployment practices for efficient development and testing.

EDUCATIONAL DETAILS

Bachelor of Engineering (B.E.) in Computer Science (Cyber Security) | CGPA: 8.71

(2021–2025)

University of Mumbai
